

## Network and Internet

-Devendra Singh

A **computer network**, often simply referred to as a network, is a collection of [computers](#) and devices interconnected by communications channels that facilitate communications among users and allows users to share resources. Networks may be classified according to a wide variety of characteristics. A computer network allows sharing of resources and information among interconnected devices. There are three types of Network:

1. **LAN**-Local Area of Network: A [local area network](#) (LAN) is a network that connects computers and devices in a limited geographical area such as home, school, computer laboratory, office building, or closely positioned group of buildings
2. **MAN**- Metropolitan Area of Network: **metropolitan area network (MAN)** is a large [computer network](#) that usually spans a city or a large campus. A MAN usually interconnects a number of [local area networks](#) (LANs) using a high-capacity backbone technology, such as fiber-optical links, and provides up-link services to [wide area networks](#) (or WAN) and the [Internet](#).

A Metropolitan Area Network (MAN) is a large computer network that spans a metropolitan area or campus. Its geographic scope falls between a WAN and LAN. MANs provide Internet connectivity for LANs in a metropolitan region, and connect them to wider area networks like the Internet.

3. **WAN**- Wide Area of Network for e.g Internet: A [wide area network](#) (WAN) is a computer network that covers a large geographic area such as a city, country, or spans even intercontinental distances, using a communications channel that combines many types of media such as telephone lines, cables, and air waves.

### Internet:

Internet consists of hundreds of thousands of local computer networks interconnecting dozens or sometimes hundreds of computers each. They have all been interconnected with a gigantic web of cables and satellite links spanning the Globe. Thus Internet is the network of networks, interconnecting small local and regional nets into a worldwide web.

### History of the Internet and Related Networks

#### Introduction

In 1973, the U.S. Defense Advanced Research Projects Agency (DARPA) initiated a research program to investigate techniques and technologies for interlinking packet

networks of various kinds. The objective was to develop communication protocols, which would allow networked computers to communicate transparently across multiple, linked packet networks. This was called the Internetting project and the system of networks, which emerged from the research, was known as the "Internet." The system of protocols which was developed over the course of this research effort became known as the TCP/IP Protocol Suite, after the two initial protocols developed: Transmission Control Protocol (TCP) and Internet Protocol (IP).

In 1986, the U.S. National Science Foundation (NSF) initiated the development of the NSFNET which, today, provides a major backbone communication service for the Internet. With its 45 megabit per second facilities, the NSFNET carries on the order of 12 billion packets per month between the networks it links. The National Aeronautics and Space Administration (NASA) and the U.S. Department of Energy contributed additional backbone facilities in the form of the NSINET and ESNET respectively. In Europe, major international backbones such as NORDUNET and others provide connectivity to over one hundred thousand computers on a large number of networks. Commercial network providers in the U.S. and Europe are beginning to offer Internet backbone and access support on a competitive basis to any interested parties.

Various consortium networks provide "Regional" support for the Internet and "local" support is provided through each of the research and educational institutions. Within the United States, much of this support has come from the federal and state governments, but a considerable contribution has been made by industry. In Europe and elsewhere, support arises from cooperative international efforts and through national research organizations. During the course of its evolution, particularly after 1989, the Internet system began to integrate support for other protocol suites into its basic networking fabric. The present emphasis in the system is on multiprotocol networking, and in particular, with the integration of the Open Systems Interconnection (OSI) protocols into the architecture.

Both public domain and commercial implementations of the roughly 100 protocols of TCP/IP protocol suite became available in the 1980's. During the early 1990's, OSI protocol implementations also became available and, by the end of 1991, the Internet has grown to include some 5,000 networks in over three dozen countries, serving over 700,000 host computers used by over 4,000,000 people.

A great deal of support for the Internet community has come from the U.S. Federal Government, since the Internet was originally part of a federally-funded research program and, subsequently, has become a major part of the U.S. research infrastructure. During the late 1980's, however, the population of Internet users and network constituents expanded internationally and began to include commercial facilities. Indeed, the bulk of the system today is made up of private networking facilities in educational and research institutions, businesses and in government organizations across the globe.

The Coordinating Committee for Intercontinental Networks (CCIRN), which was organized by the U.S. Federal Networking Council (FNC) and the European Research Association pour la Recherche Européenne (RARE), plays an important role in the coordination of plans for government-sponsored research networking.

CCIRN efforts have been a stimulus for the support of international cooperation in the Internet environment.

## **What is required for Internet**

### **The following items are to be required for Internet to setup dial up connection**

1. **PC** – Personal computer with windows operating system
2. **Local Telephone connection-** Where you can dial from which you have taken Internet connection.
3. **Modem** - Is used for converting signal since telephone is based on analog signal and computer is accepting digital signal Modem is converting analog signal to Digital and Digital to analog.
4. **Broadband Internet connection** - From Internet Service Provider for example; BSNL, Reliance, TATA, and Airtel these are Internet service providers. They have given Broadband Internet connection.
5. **Internet Explorer Web browser**

Internet Explorer makes it easier to get the most from the World Wide Web, whether you are searching for new information or browsing your favorite Web sites. And built-in IntelliSense technology can save you time completing routine Web tasks, such as automatically completing Web addresses and forms for you, and automatically detecting your network and connection status.

### **The easiest way to get around the Web**

- When you start typing a frequently used Web address in the Address bar, a list of similar addresses appears that you can choose from. And if a Web-page address is wrong, Internet Explorer can search for similar addresses to try to find a match.
- Search for Web sites by clicking the **Search** button on the toolbar. Then in the Search bar, type a word or phrase that describes what you're looking for. When your search results appear, you can view the individual Web pages without losing your list of search results.
- You can also search directly from the Address bar. Just type common names or words, and Internet Explorer can automatically take you to the site that most likely matches what you are searching for, and list other likely sites as well.
- Go to other Web pages similar to the one you are viewing, without even doing a search. Just use the Show Related Sites feature.
- Once you're on a Web page, Internet Explorer can help you complete entries in any kind of Web-based form. Start typing, and a list of similar entries appears that you can choose from.
- Browse through a list of Web pages you recently visited by clicking the **History** button on the toolbar. In addition you can rearrange or search the History list.

## How to Open Web site on Internet:

After connect your computer with Internet, double click on Internet Explorer and type the web address in address bar and press enter key. You will see the desired information for example.

After the page has been opened you can moving the mouse pointer over the item. If the pointer changes to a hand, the item is a link. A link can be a picture, a 3-D image, or colored text (usually underlined To start browsing the Web, click any link on your home page, which is the page that appears when you start Internet Explorer. You can see whether an item on a page is a link by).

Now you're ready to find a Web site on your own.

## To save a Web page on your computer

1. On the **File** menu, click **Save As**.
2. Double-click the folder you want to save the page in.
3. In the **File name** box, type a name for the page.
4. In the **Save as type** box, select a file type.

To save all of the files needed to display this page, including graphics, frames, and style sheets, click **Web Page, complete**. This option saves

each file in its original format but hyperlink will be open when your computer is connected on Internet

### To save a Pictures and Image

1. select the image or picture and right click on mouse then select save as picture.
2. Double-click the folder you want to save the picture in.
3. In the **File name** box, type a name for the picture file and click ok.

### To print a Web page

1. On the **File** menu, click **Print**.
2. Set the printing options you want.

### Some important web sites are:

1. Important news paper website

<http://www.jagran.com>

<http://www.hindustantimes.com>

<http://www.thetimesofindia.com>

<http://www.bhaskar.com>

2. Haryana Govt. website: <http://haryana.gov.in>

3. Govt. of India web sites: <http://goidirectory.gov.in>

4. Supreme court of India <http://supremecourtfindia.nic.in>

5. High court Chandigarh <http://highcourtchd.gov.in>

6. Indian courts <http://www.indiancourts.nic.in/sitesmain.htm>

7. **AG, Haryana**, State Government of Haryana <http://aghry.gov.in/>

8. Searching any web site address using this: <http://www.google.co.in>

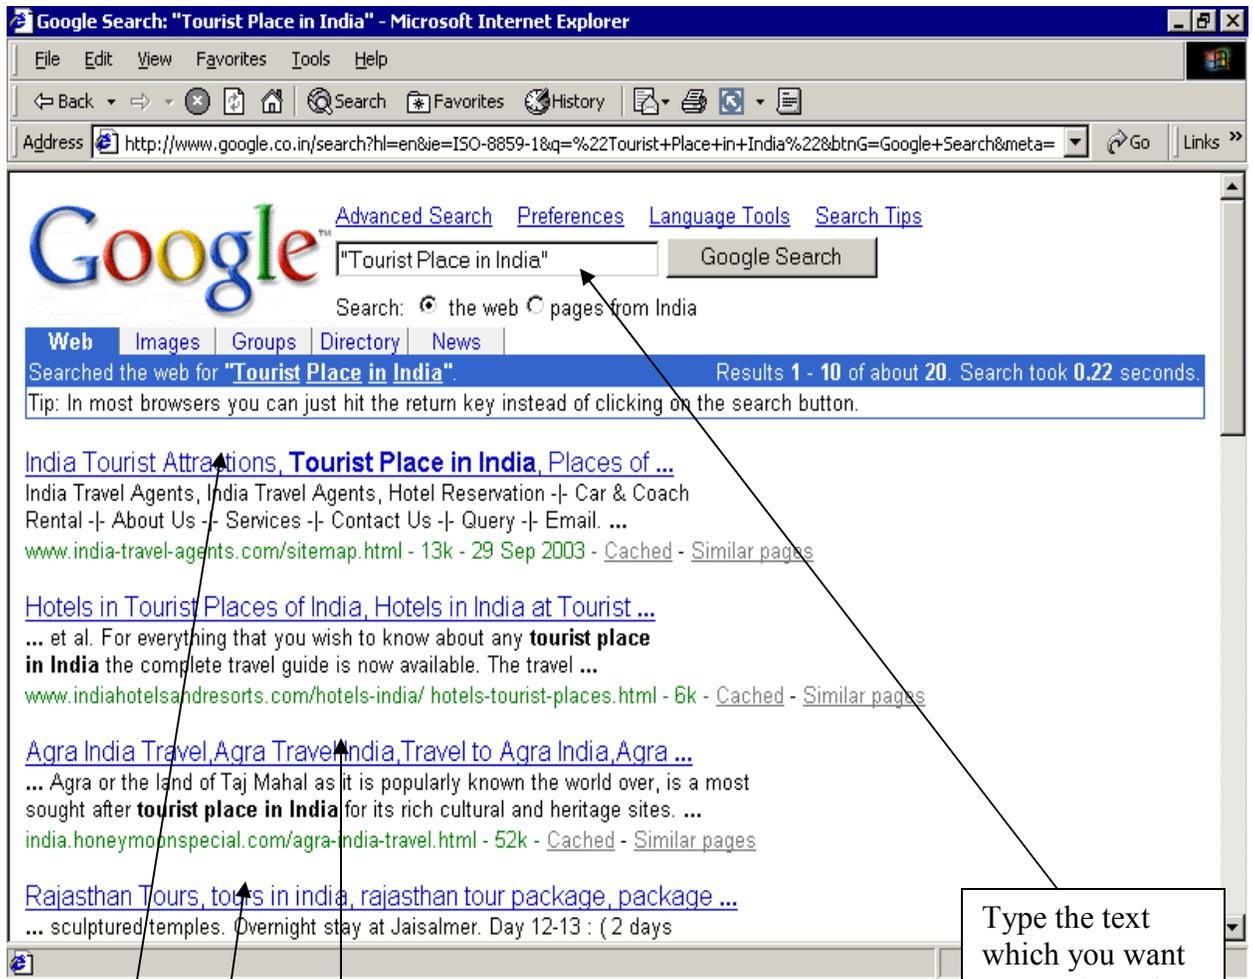

## Search engine:

Suppose you want to search some information on Internet but you did; not know web address. You can use one of them to search the web address on the Internet

For example:

1. [www.google.com](http://www.google.com)

Click on blue underline to see the detail information .after clicking ,the web address will automatically show on address bar

Type the text which you want to search on the Internet and click on Google Search

## 2. [www.yahoo.com](http://www.yahoo.com)

Yahoo! Search Results for "Tourist Place in India" - Microsoft Internet Explorer

... sculptured temples. Overnight stay at Jaisalmer. Day 12-13 : ( 2 days at Jaisalmer)

Done

Type the text which you want to search on the Internet and click on Search

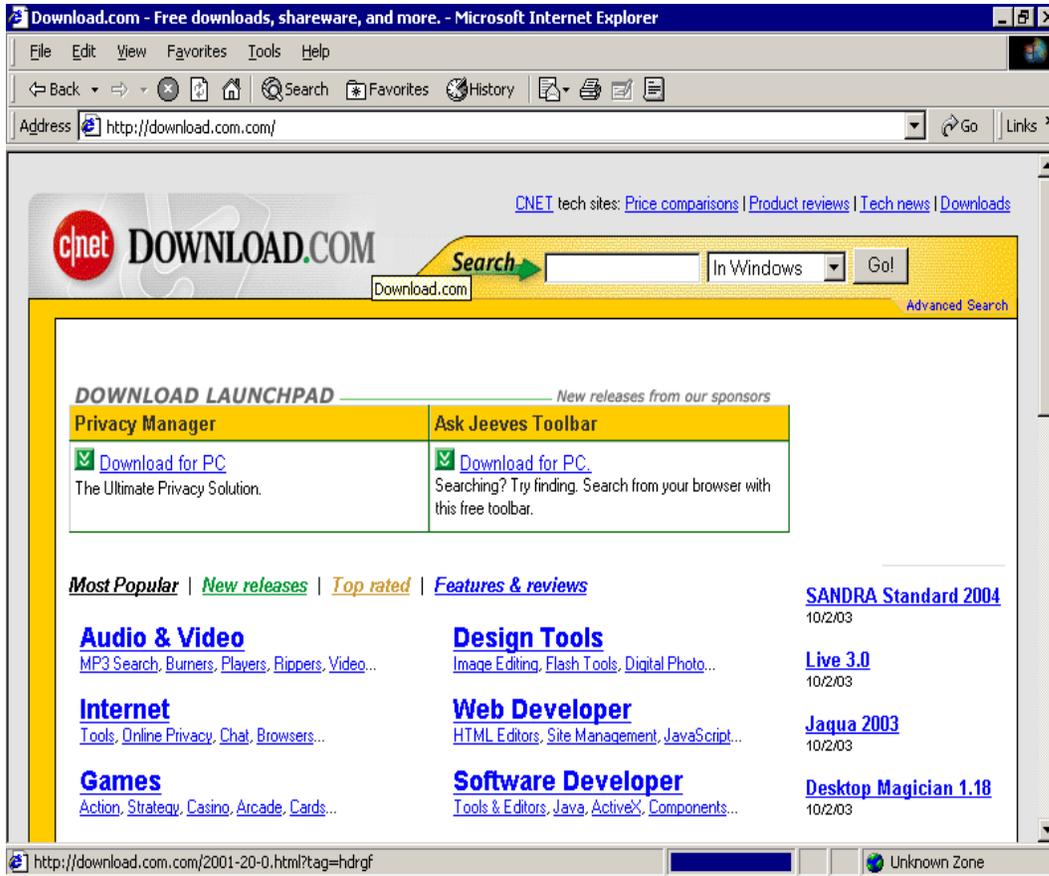

Click on blue underline to see the detail information .after clicking the web address will automatically show on address bar

3. [www.altavista.com](http://www.altavista.com) : Similarly you can use [www.altavista.com](http://www.altavista.com) to search the web address on the Internet

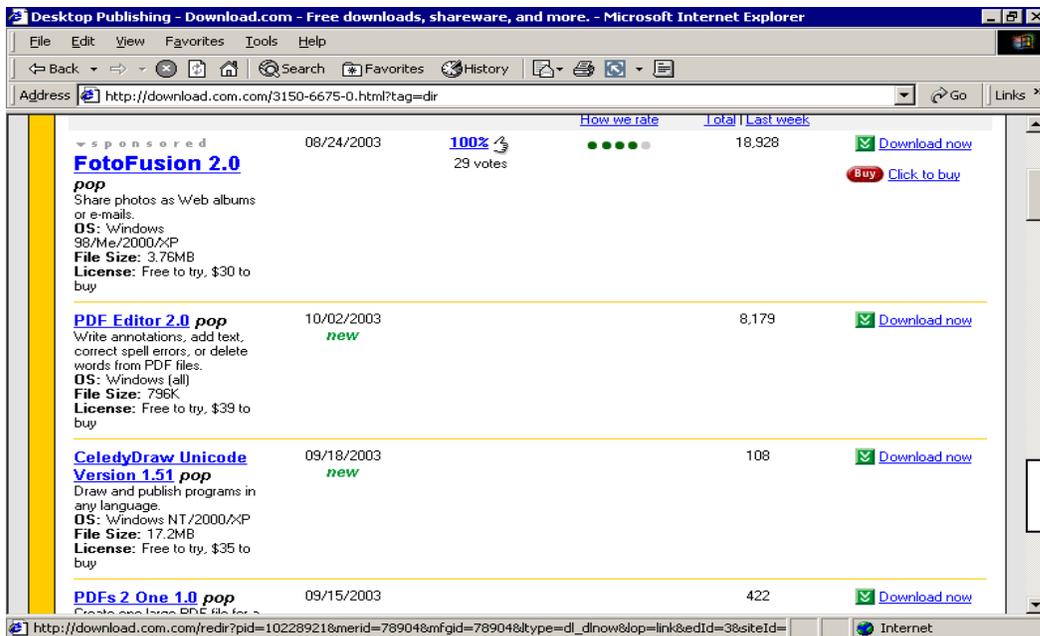

### How to download file from Internet

There is some free web site on the Internet where you can download some free trial software for example. [www.download.com](http://www.download.com)

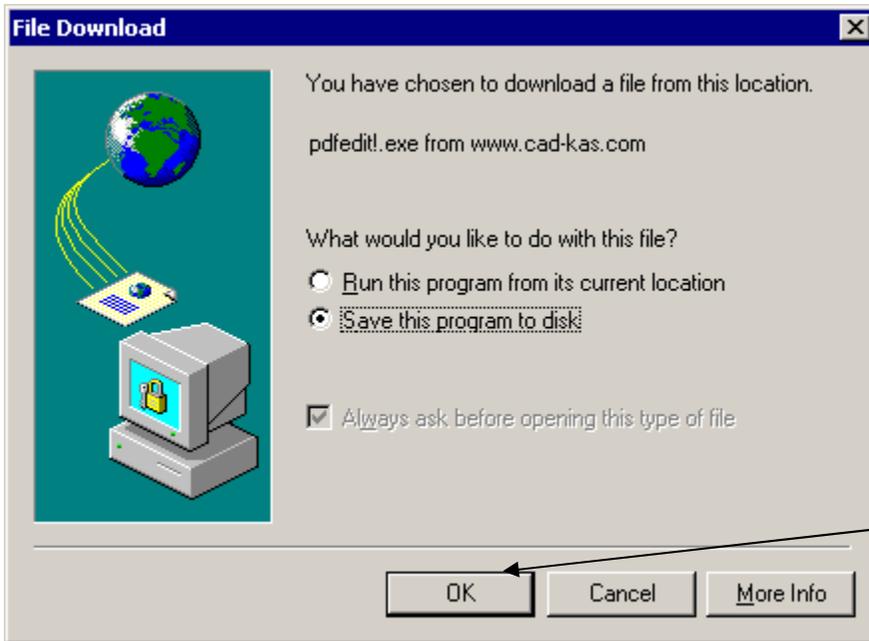

## Step 1

## Step 2:

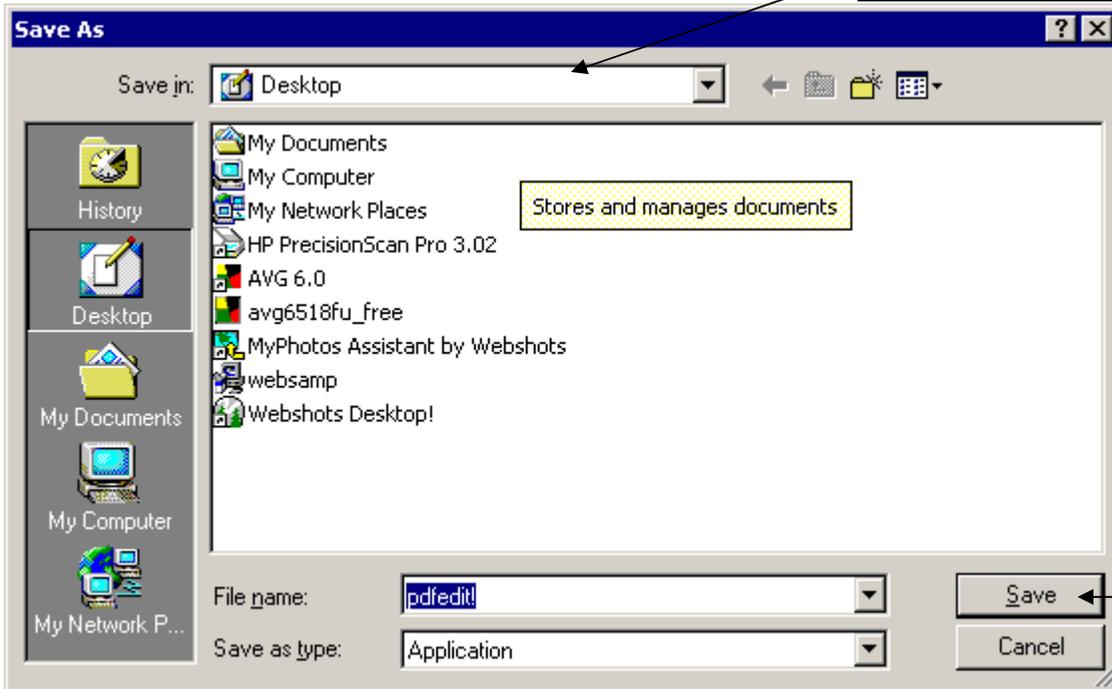

**Step 3:** After performing step 2 the following screen appears below.

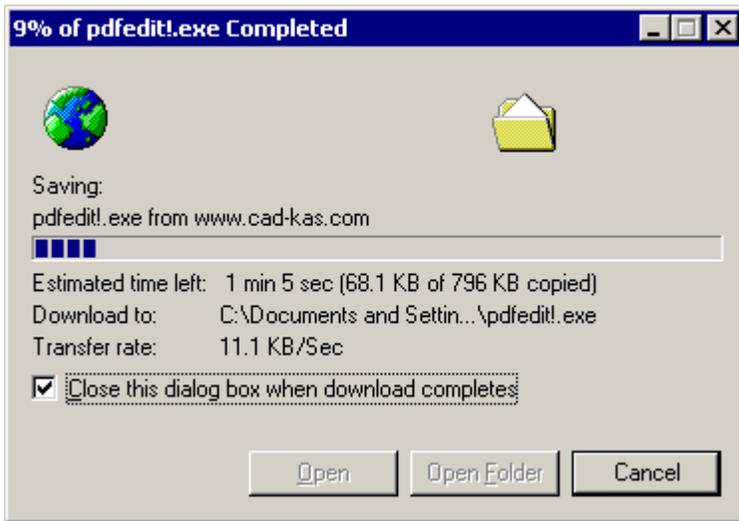

**Step 4 :**

After performing step 3 the following screen appears below.

Choose folder where you want to save file

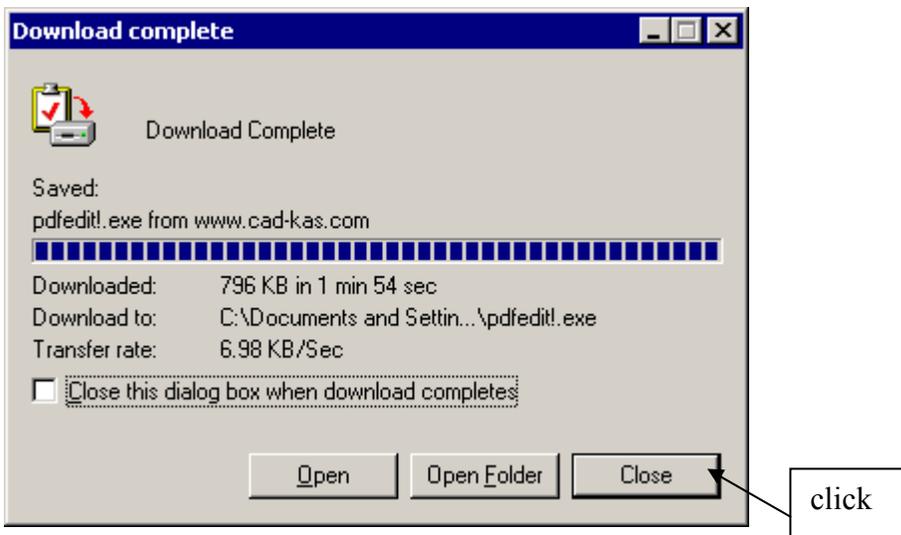

**Step 5:** After performing step 4 the following screen appears below. The file start-downloading, wait till the downloading complete.

### Step 6:

After performing step 5 the following screen appears below.

After downloading is complete click close button . File is save on the folder when you can choose in step 4. Double click on download file the software will be installed in your computer.

### Internet E-mail:

Electronic mail or email is the most useful application of the Internet. Some web site, which can provide free email service on the Internet. These are

1. <http://www.rediffmail.com>
2. <http://mail.yahoo.com>
3. <http://www.indiatimes.com>
4. <http://www.hotmail.com>
5. <http://www.gmail.com>

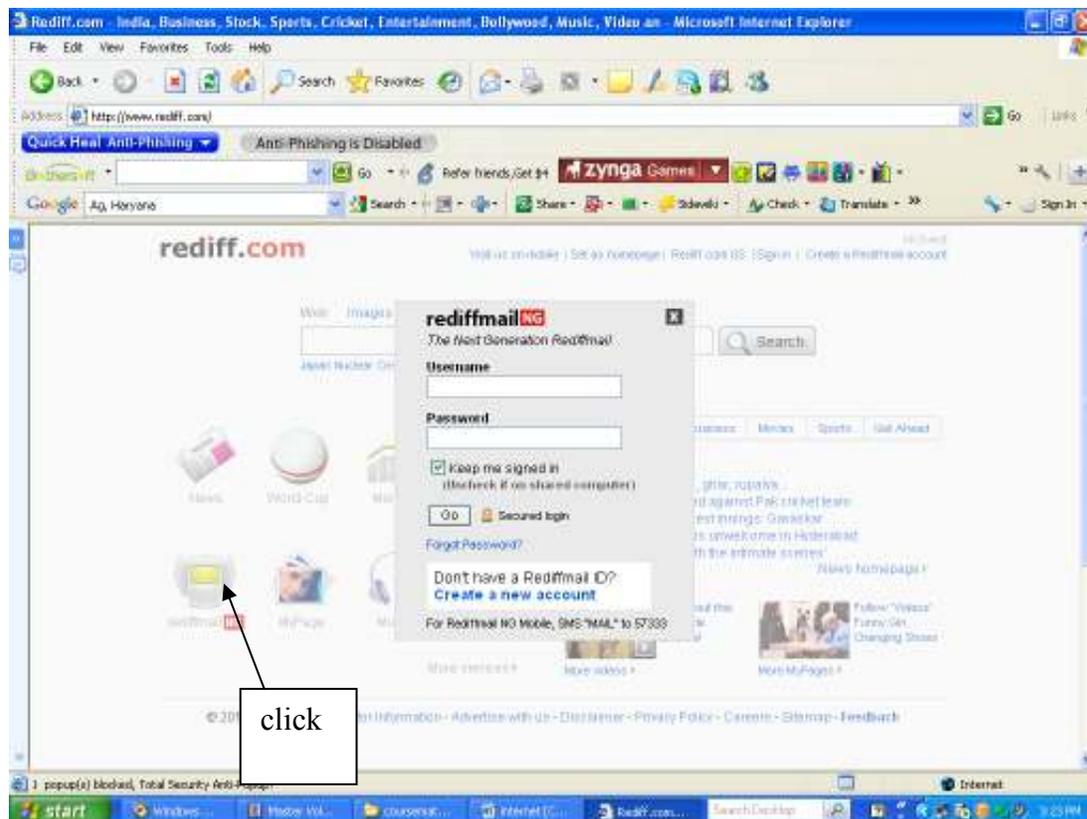

To access e-mail you can create e-mail address on any one of the web site. For example.

### **Creating New Account on [www.rediffmail.com](http://www.rediffmail.com)**

**Step 1:** Connect your computer with Internet and double click on Internet Explorer icon on desktop

**Step 2:** Type the web site address on address bar. For e.g. [www.rediffmail.com](http://www.rediffmail.com) and press enter key

**Step 3 :** The web site will be open as seen below. For new user click on sign up

**Step 4:** After opening the website click on sign up for new user. The following screen appears below. Choose free sign up now rest is paid e-mail web sites.

**It's FREE!**

**« Skip and Go to My Inbox »**

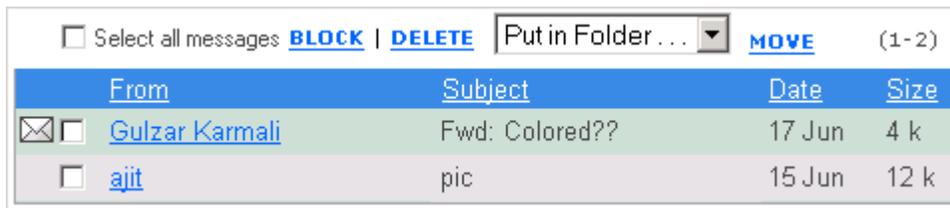

Done Internet

Step 7: After clicking to **Go to Inbox** your e-mail account is created.

The Inbox is the place where all your new messages are stored. When you login, you will see how many messages you have in your Inbox and how many of them are new.

<input type="checkbox"/> Select all messages <a href="#">BLOCK</a>   <a href="#">DELETE</a> Put in Folder ... <a href="#">MOVE</a> (1-2)				
	From	Subject	Date	Size
<input checked="" type="checkbox"/>	<a href="#">Gulzar Karmali</a>	Fwd: Colored??	17 Jun	4 k
<input type="checkbox"/>	<a href="#">ajit</a>	pic	15 Jun	12 k

Your email messages are displayed one below the other, with the latest message first. Each new mail is shown with a symbol next to it depending on the type of mail it is.

 = New Email

**N** = New Newsletter

Also shown is the sender of the message, the subject, the date it was sent and the size of the message.

### Reading your mail

Click the sender's name to read that particular message.

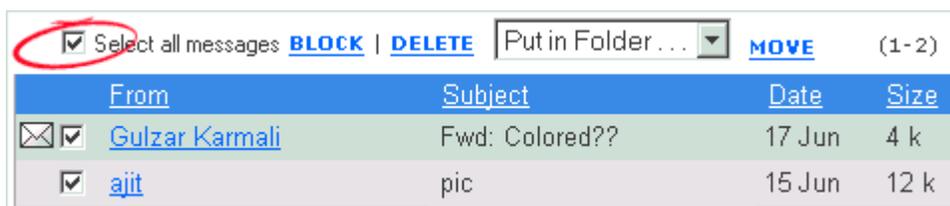

### Sorting your mail

You can sort your mail in your inbox.

1. To sort your mail by Sender, click on the column header Sender
2. To sort your mail by Subject click on the column header Subject
3. To sort your mail by Date click on the column header Date
4. To sort your mail by Size click on the column header Size

### Selecting mail

1. To select a message you wish to delete, move or block, you need to click in the box next to the message.
2. Select multiple messages by clicking in the boxes next to the messages.
3. If you wish to select all messages, click in the box next to Select all messages.

<input checked="" type="checkbox"/> Select all messages <a href="#">BLOCK</a>   <a href="#">DELETE</a> Put in Folder ... <a href="#">MOVE</a> (1-2)				
	From	Subject	Date	Size
<input checked="" type="checkbox"/>	<a href="#">Gulzar Karmali</a>	Fwd: Colored??	17 Jun	4 k
<input checked="" type="checkbox"/>	<a href="#">ajit</a>	pic	15 Jun	12 k

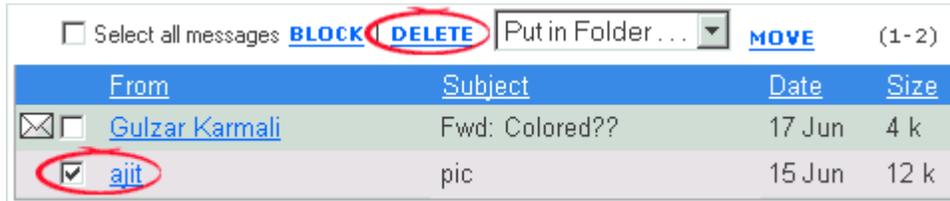

### Deleting your mail

You can delete the mail messages that you do not wish to keep. All deleted messages are moved to the Trash folder. They will be deleted permanently from

the Trash folder within 24 hours.

To delete your mail messages

1. Click in the box(es) next to the message(s) you would like to delete.
2. Click on "Delete" at the top of the page.
3. The selected message(s) will be deleted.

### Blocking a sender

To reduce unwanted e-mail, you can block senders from whom you don't want to receive mail. To make changes to your Blocked sender list, go to Settings and click Block Sender. Remove a person from your blocked sender list to resume getting mail from him/her To block sender(s)

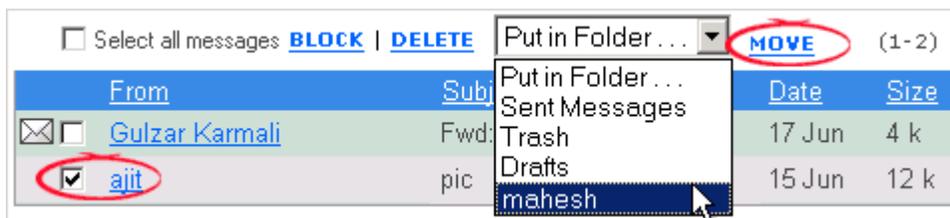

1. Click in the box(es) next to the address(es) you want to block.
2. Click on "Block Sender" at the top of the page.
3. The selected address(es) will be blocked.

### Moving your mail

You can move your mail messages to other folders that you create. This will help you organize your mails better. To move a mail message(s)

1. Click in the box(es) next to the message(s) you would like to move.
2. Choose the folder you'd like to move the messages to, from the drop down list of folders at the top of the page.
3. Click the "Move" button to move the selected messages to the chosen folder.

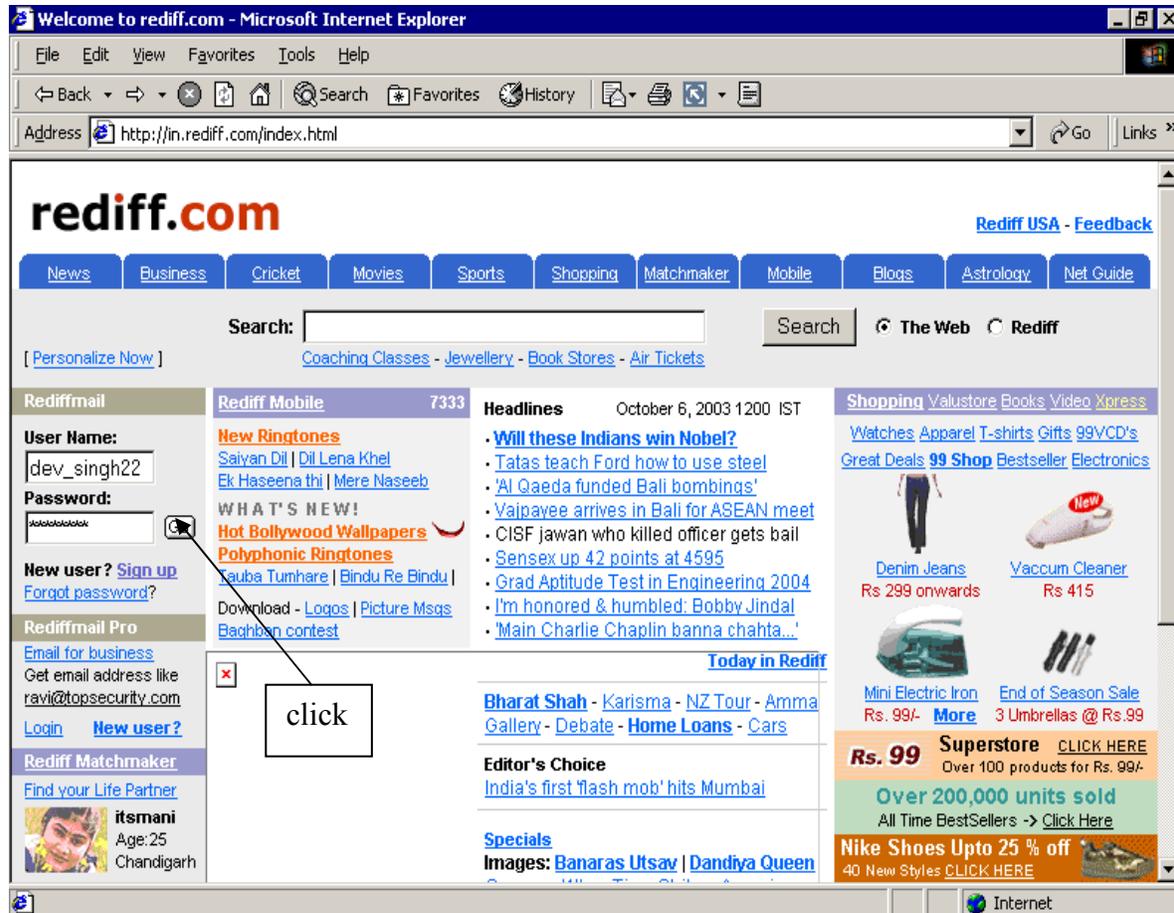

## Send Message with attachment:

**Step 1:** Connect your computer with Internet and double click on Internet Explorer icon on desktop

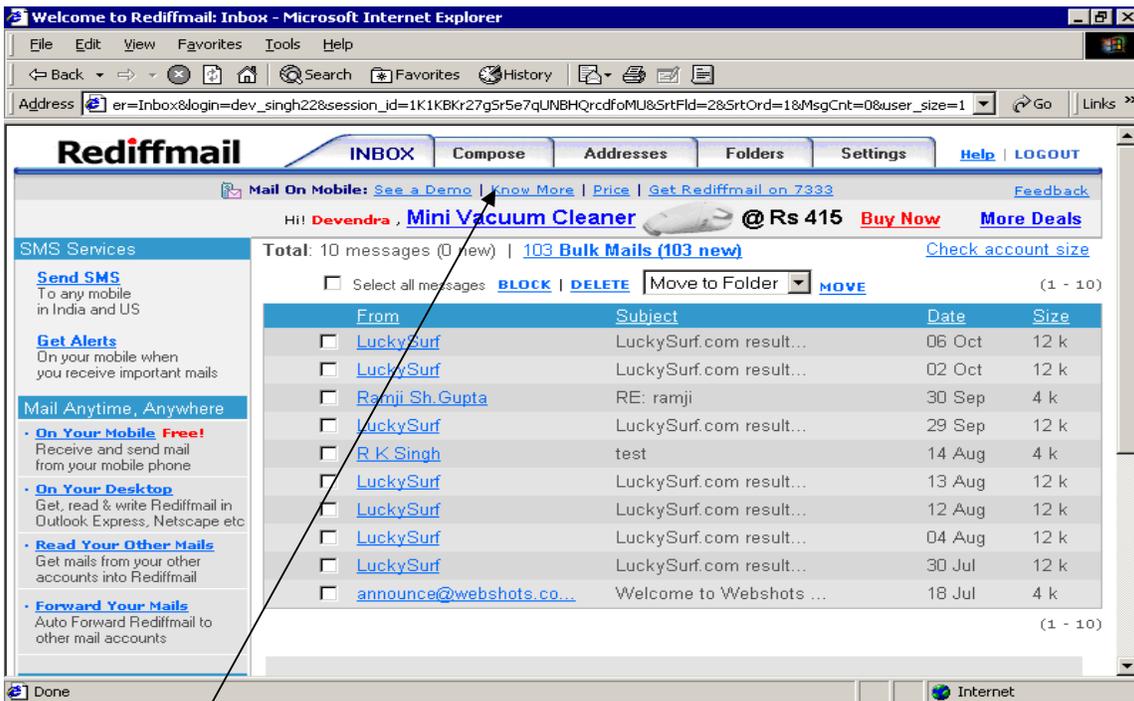

**Step 2:** Type the web site address on address bar. For e.g. [www.rediffmail.com](http://www.rediffmail.com) and press enter key

**Step 3:** The web site will be open as seen below. Type the **user name** and **password** and click on **Go**.The screen appears below

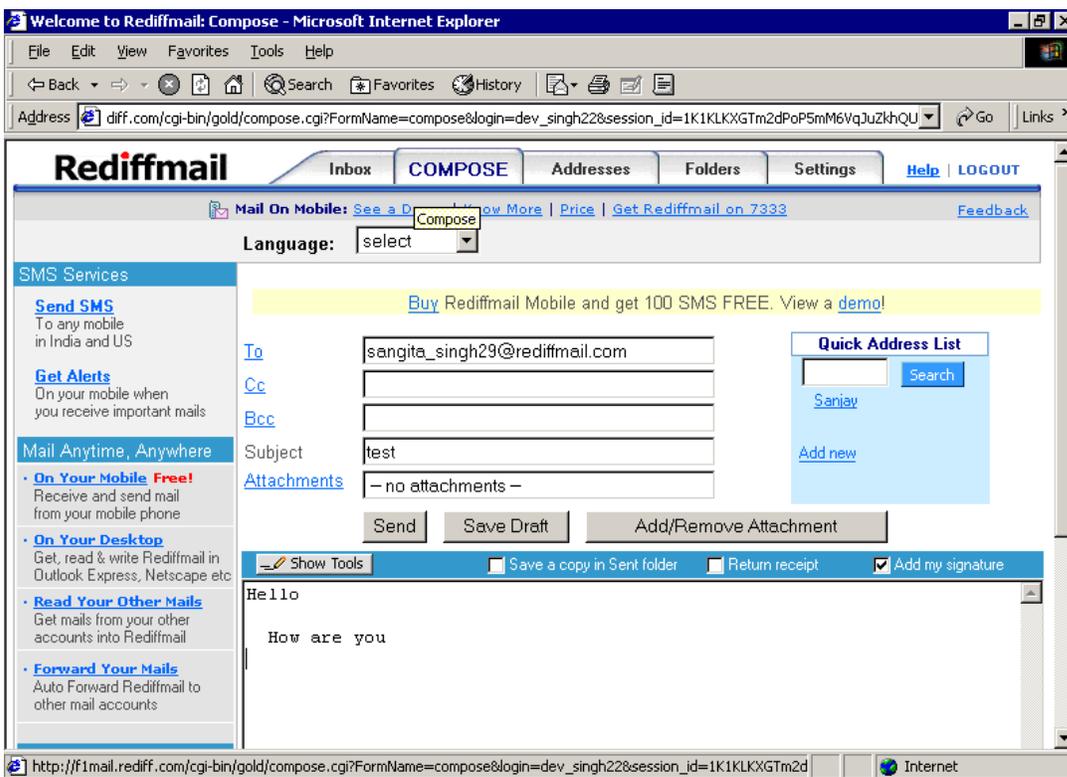

### Screen 1:

**Screen 2:** After clicking **Go** in screen 1. The screen appears below

Screen 3: After clicking **compose** in screen 2. The screen appears below

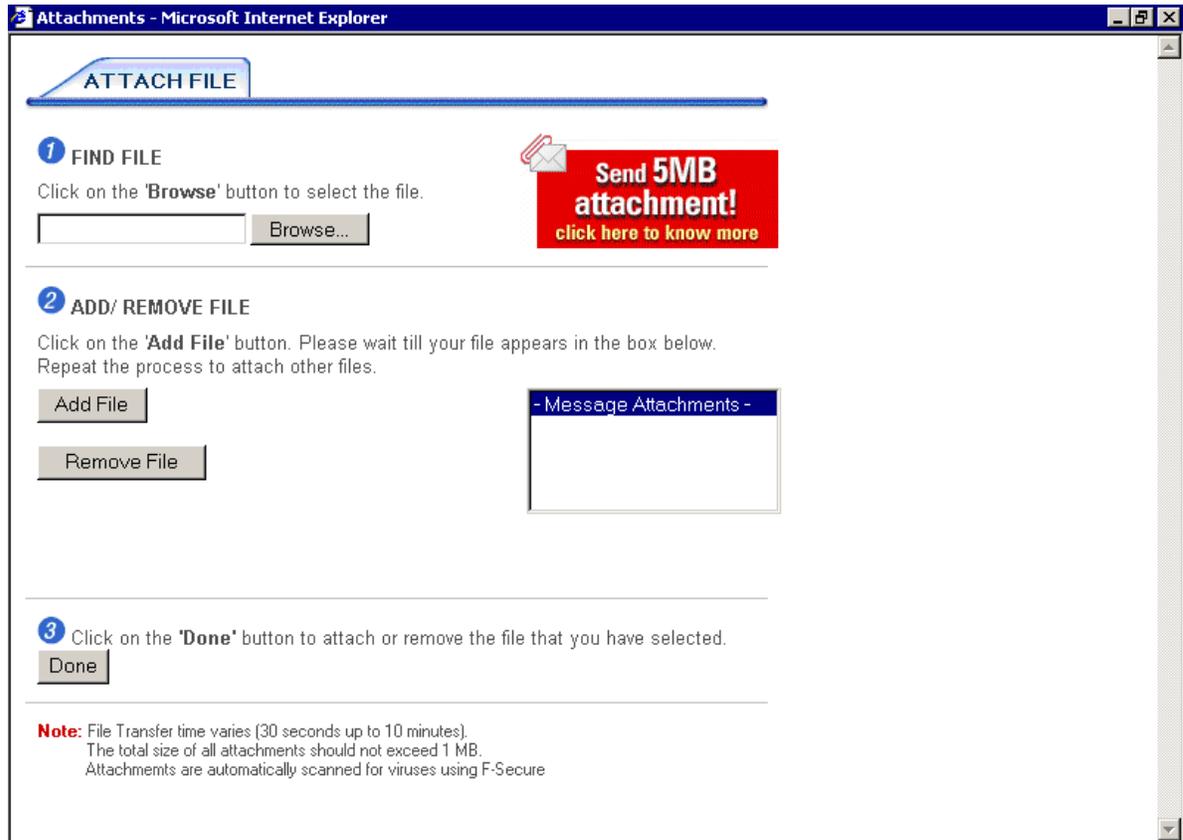

in screen 3

**To:** Type the e-mail address where you want to send the letter

**Cc:** Type the e-mail address where you want to send the same copy of letter to other

Type the letter

**Step 4:** click **Add/Remove Attachment** in screen 3. The screen appears below.

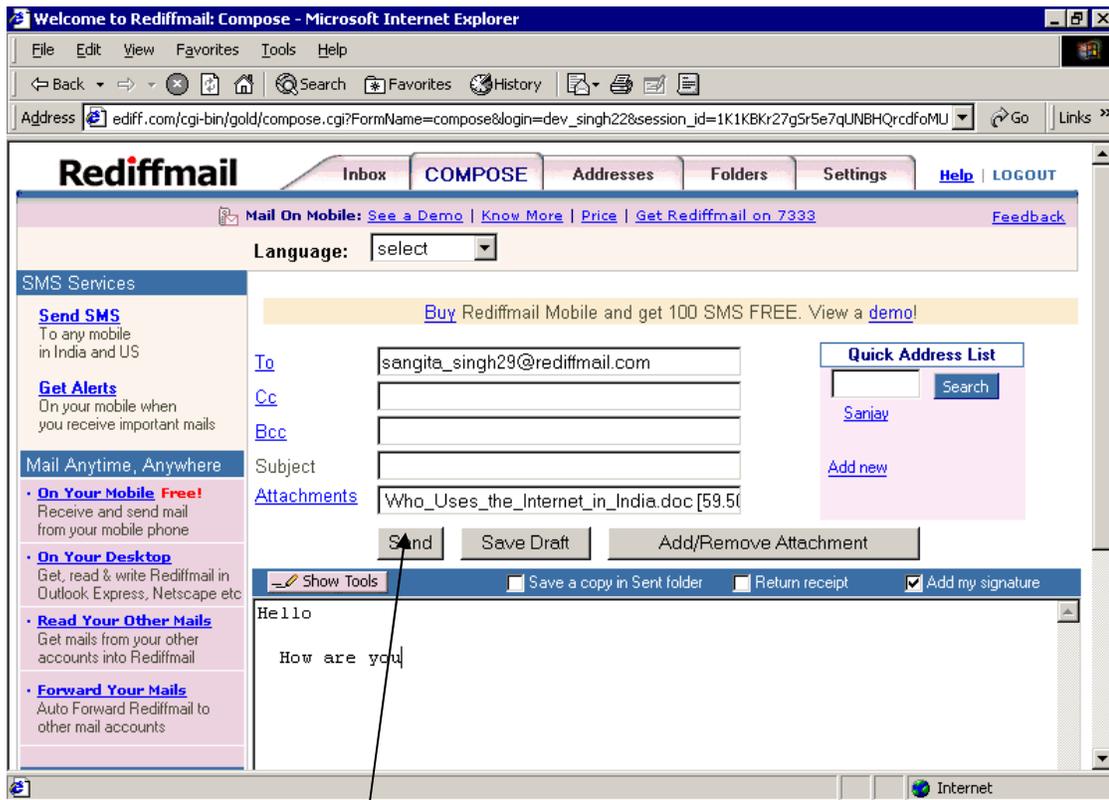

**Perform all the 3 steps:**

1. **Find file:** click on **Browse** button and chose the file which you want to attach with message.
2. **Add file:** After chosen the file click on add file and wait till the file appears in **Message Attachments**
3. **Done:** after file shown in Message Attachments box click done.

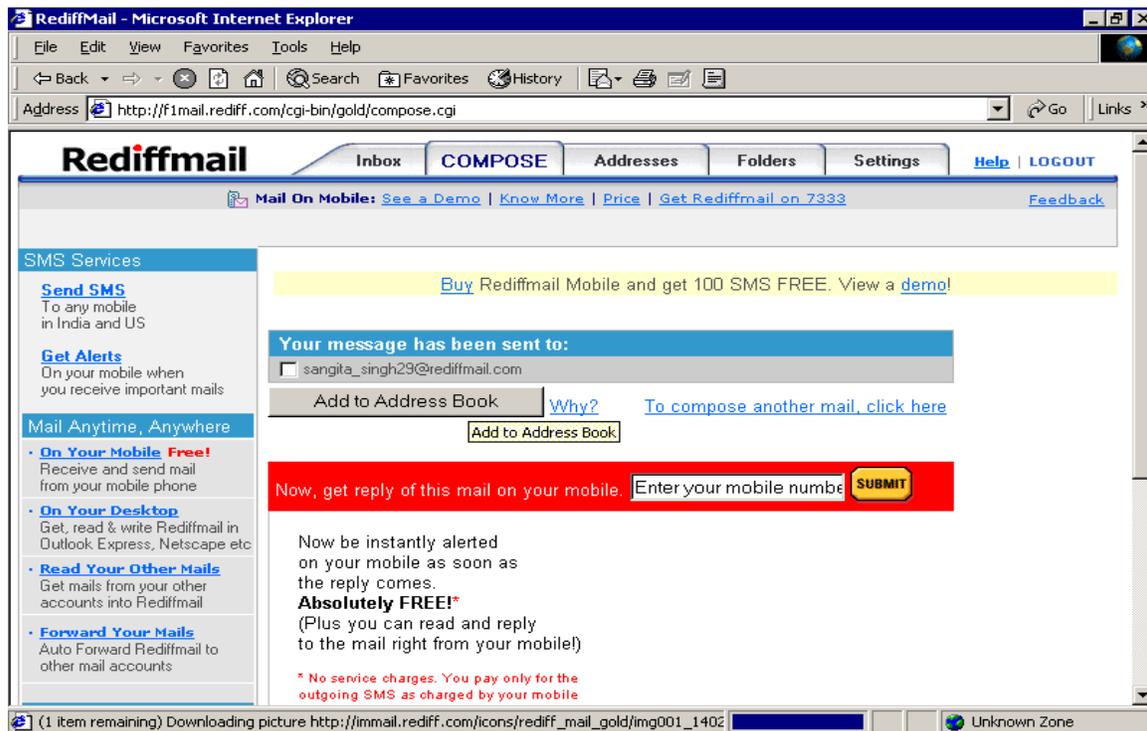

The screen appears below.

Doing all the three steps. The file shown in **Attachments** columns

Click on send

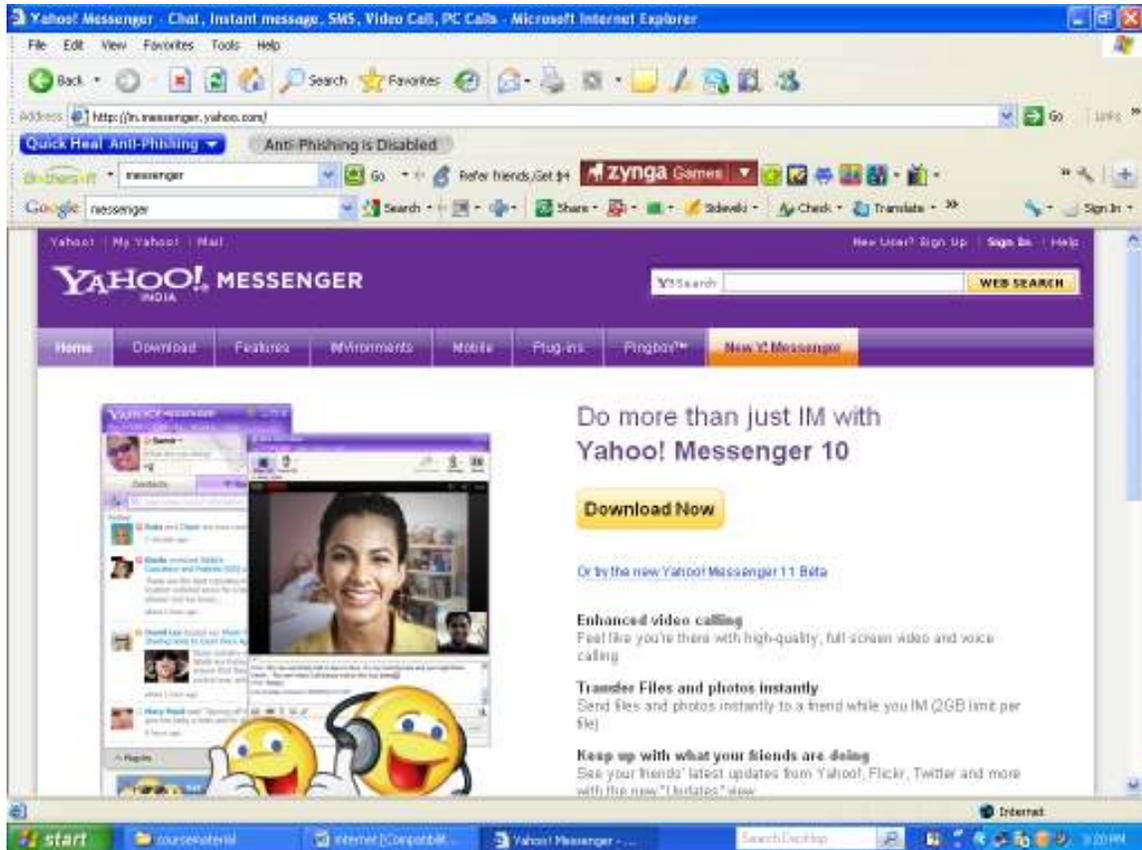

After clicking on send button your message has been sent to the given address for e.g. as shown in the screen below.

## Messengers:

1. Yahoo Messenger (<http://in.messenger.yahoo.com>)
2. Windows Live Messenger( <http://explore.live.com/windows-live-messeng>)
3. Rediff Bol ([www.rediff.com/messenger/messenger.htm](http://www.rediff.com/messenger/messenger.htm))
4. Google talk ([www.google.com/talk](http://www.google.com/talk))
